Aiden McDonald – Atlanta, GA

aidenmc220@gmail.com | 404-783-3089 | www.linkedin.com/in/aidenmcdonald220 | aidenmcdonald5.github.io

EDUCATION

Georgia Institute of Technology | *B.S. in Computational Media (Computer Science & Media)* May 2028

- Relevant Coursework: Data Structures and Algorithms, Intro to Object-Oriented Programming, Objects and Design, Computational Media, Media Device Architecture, Introduction to Artificial Intelligence, Game Design

PROJECTS

Infiltrator | *p5.js, JavaScript* April 2026 – May 2026

- Co-designed and co-developed a WarGames-inspired investigative deduction game in p5.js, released on itch.io
- Engineered a scene-based state machine to manage transitions across six distinct game screens, including a fully rendered CRT television interface with phosphor glow, scanlines, and an animated typewriter boot-up sequence
- Created three interactive clearance minigames (identity tag drag-and-drop, wire cross-connection, and globe continent mapping) that act as procedural task gates players must clear before unlocking the accusation phase
- Iterated on playtest feedback by rewriting the in-game instructions so that every investigation step was clearer

Stealth Horror Prototype | *Unity, C#* October 2026 – November 2026

- Prototyped a top-down 3D stealth horror game in Unity where the player sneaks past creatures to escape a house
- Designed a noise-based stealth system in which sprinting alerts nearby creatures and is limited by a sprint timer and cooldown, while creatures hunt with a vision cone, investigate sounds, and lose players who stay hidden
- Wrote a design document with a scope cut list and measurable goals, then playtested and presented the prototype

Reef Rescue (Game Boy Advance) | *C* October 2026

- Programmed a Game Boy Advance game in C where a crab collects 10 pearls with 3 lives while dodging jellyfish
- Rebuilt the game from Mode 3 rectangles into Mode 4 with palette-based image art and added a scoreboard state with a persistent high score, using object pooling and DMA transfers to keep drawing fast on the GBA hardware

JobConnect | *Django, Python* September 2026 – November 2026

- Developed a full Django job platform on a 5-person team with job seeker, recruiter, and administrator user roles
- Built the platform's Administrator role, job post moderation, CSV data export, and review of reported users and posts, and finished a recruiter feature that pins office locations on an interactive map for job seekers to browse

EXPERIENCE AND LEADERSHIP

YMCA | *STEM Event Vendor* August 2024 – Present

- Organized and facilitated STEM-themed educational booths at 3 large-scale community events across Metro Atlanta, engaging 100-150 youth participants at each event through interactive, hands-on STEM demonstrations
- Planned hands-on STEM activities to promote collaborative problem solving and scientific curiosity among youth

YMCA | *Membership Representative* August 2024 – July 2025

- Secured 5-7 new memberships weekly through targeted sales strategies and facility tours to drive engagement
- Resolved technical website and application issues for users, directly improving the digital customer experience

Sigma Nu Fraternity | *Pool Manager* October 2025 – Present

- Managed a 20,000-gallon fraternity pool and led restoration and repair initiatives to reduce operational costs

SKILLS

- Languages: Java, Python, JavaScript, C, C# | Tools: Unity, Django, p5.js, Pygame, NumPy, PyTorch, Git, GitHub
